

CLAIMS

- 1 1. A composition comprising:
2 a first nanotube attached to a fiber.
- 1 2. The composition of claim 1, wherein the first nanotube has a diameter ranging from
2 about 30 to about 300 nanometers.
- 1 3. The composition of claim 1, wherein the first nanotube has a length ranging from about
2 10 to about 10,000 nanometers.
- 1 4. The composition of claim 1, wherein the first nanotube is single-walled or multi-walled.
- 1 5. The composition of claim 1, wherein the first nanotube comprises a metal.
- 1 6. The composition of claim 5, wherein the metal is rhodium, ruthenium, manganese,
2 chromium, copper, molybdenum, platinum, nickel, cobalt, palladium, gold, or silver.
- 1 7. The composition of claim 1, wherein the fiber is an electrospun fiber.
- 1 8. The composition of claim 1, wherein the fiber is ceramic, carbonized, elemental, or a
2 chemically tractable metal.
- 1 9. The composition of claim 1, wherein the fiber is boron nitride, boron carbide, nitrogen
2 carbide, or silicon.
- 1 10. The composition of claim 1, wherein a second nanotube is attached to the first nanotube.
- 1 11. A composition comprising:
2 a second nanotube attached to a first nanotube.
- 1 12. A method comprising the step of:
2 growing a nanotube on a fiber substrate.
- 1 13. The method of claim 11, wherein the fiber substrate is an electrospun fiber.

- 1 14. The method of claim 11, wherein the fiber substrate is ceramic, carbonized, elemental, or
2 a chemically tractable metal.
- 1 15. A method comprising the step of:
2 growing a second nanotube on a first nanotube substrate.
- 1 16. The method of claim 14, wherein the second nanotube has a diameter that is less than that
2 of the first nanotube substrate.
- 1 17. A method comprising the step of:
2 using the composition of claim 1 as an electrode.
- 1 18. A method comprising the step of:
2 using the composition of claim 1 as a filtration device.
- 1 19. The composition of claim 17, wherein the filtration device has interstices greater than or
2 equal to about two nanometers.
- 1 20. A method comprising the step of:
2 using the composition of claim 1 as an electrochemical connection to the nervous
3 system or an electrochemical connection to the interior of a living cell.
- 1 21. A method comprising the step of:
2 using the composition of claim 1 as a support structure for compounds having
3 characteristic dimensions ranging from about 1 to about 100 nanometers.
- 1 22. A method comprising the step of:
2 performing Raman spectroscopy using the composition of claim 1 as a support
3 structure.
- 1 23. A method for manufacturing a metal-containing nanofiber comprising the steps of:
2 electrospinning a solution comprising an electrospinnable polymer and at least
3 one metal to produce a metal-containing nanofiber; and
4 carbonizing the resultant metal-containing nanofiber.

- 1 24. The method of claim 22, wherein the electrospinnable polymer is polyacrylonitrile.
- 1 25. The method of claim 22, wherein the metal is a noble metal.
- 1 26. The method of claim 22, wherein the metal is Ag, Fe, Pd, Ni, or Co.
- 1 27. A method comprising:
2 using a hierarchical structure as a fuel-cell electrode.
- 1 28. A method comprising:
2 using a hierarchical structure in an electrophoresis filtration system.
- 1 29. A method comprising:
2 using a hierarchical structure as a conductive medium in a photodiode.
- 1 30. The method of claim 28 wherein a carotene-porphyrin-fullerene compound is attached to
2 method for using a hierarchical structure.
- 1 31. The method of claim 28, wherein a dendrimer is attached to the hierarchical structure.
- 1 32. A method comprising:
2 using a hierarchical structure in a battery.
